# AndroidDeveloperChallenge: IDEA Phase

In the era of Intelligence and Machine Learning, i want to improve the experience of Billions of Android users by giving a simple IDEA that can change the overall experience of photography, Blogging, Travelling, Picnic, Sight shooting, gathering, cities, airport, and many places of the world, where people enjoys to takes photograph, selfies, group photos etc.

# Whenever people will click photographs then our application will tells them about the places, monuments, and what's the spacial in the pic according to popularity of that place, things.

Taj Mahal

Place

Celebrities

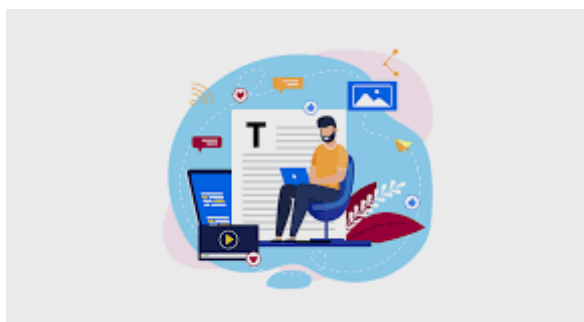

#eg. Suppose, if are taking pics of the Taj mahal, then our app not only tells about Taj mahal but also the famous personalities like Barak Obama arrived to visit Taj mahal. And you captured a photo of crowd with Taj mahal and Obama were in crowd then our app automatically detect famous personalities and monuments.

Contant

Details about place and celeb.

Tags, Hashtags

# Our app will analyse the pic and create content for bloggers, You tubers ,  
Instagramer, not only create content related to place, monuments, personalities,  
but will also creates suitable hashtags, and memes.

#and the third and the last feature of our app is -

Whenever you will take group photos, selfies etc. then our app will also suggest  
to tag those people who are present in the photo, and will send the photograph  
to all tagged people by the permission of admin account.

**This is great idea with less words, hope you will help me to build  
this great app for people under your guidance.**

**Thanks for this wonderful opportunity!**

See you in challenge.
